SOUTHERN YELLOW PINE

Wood Type	Clear Grade Softwood
Latin Name	Pinus Elliottii
Family	Pinaceae
Also known as	American pitch pine, Gulf Coast Pitch Pine, Long Leaf Pitch Pine, Southern Pine, Long Leaf Pine, Short Leaf Pine, Loblolly Pine

Applications: Heavy structural use, exterior joinery and interior joinery.

Description: The sapwood is narrow in the better grades, sometimes up to 50mm wide, lighter in colour than the heartwood which is yellowish-brown to reddish-brown. Both species are typical of the hard-pine class, being resinous, with the growth-rings usually well-marked by the contrast between the light-coloured early-wood, and the dense, darker-coloured late-wood, which produces a rather coarse texture in the wood especially in fairly rapidly grown material with its wide growth-rings.

- Weight 670 kg/m³

Properties: All species dry well with little degrade.

Durability: The general strength properties of P. Palustris and P. Elliottii compare closely with those of Douglas Fir.

Availability: Southern Yellow Pine is available from AC Timber standard stock in a range of thicknesses from 25.4mm – 50.8mm.
