

Cladding profile range

Fifteen machined sections, ordered by code. Every figure is read from the manufacturer's own vector artwork — nothing is rounded, added or inferred. Drawings reproduce that artwork exactly and are **not to scale**: order to the figures, not to the drawing.

Better Timber. Less Hassle.

READING THIS SHEET

OA is the overall sawn width. FACE is what stays visible once laid, so coverage is calculated from it, not from the overall. TH is the finished board thickness, **18mm on every profile in the range**. Other figures are dimensioned on the artwork but not labelled by feature, so we quote them as read.

SCALE & MISSING FIGURES

Sections are drawn with the thickness exaggerated for legibility, so nothing here can be measured by eye. Order to the figures.
[†] Face width is not dimensioned on the manufacturer's artwork for that section, so coverage cannot be calculated from it. Shown as a dash rather than a guess — please confirm with us before ordering.

Cladding profile range

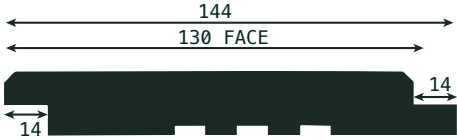

Sections ACT09 – ACT13, plus corner and trim mouldings. Machined to order in any of the seven timbers listed below.

Better Timber. Less Hassle.

- Thermowood
- Accoya
- European Oak
- Treated Softwood

Not every profile runs in every timber, and stock lengths vary by species — both confirmed on your quote. Cut to length on request.

ORDERING

Order by code and timber — “ACT01 in Western Red Cedar”. Lengths cut to order. Send a photo or drawing on WhatsApp and we will confirm coverage and quantities before you commit.

Figures on this sheet are read from the manufacturer's artwork and are accurate at the revision shown. We confirm every dimension at quote.
